A&D is an IT company offering warehouse management solutions and advanced know-how for both producers and distributors. A&D operates in the Supply Chain and offers proprietary solutions, whose heart is the software WMS Automa, focused on operational management of the materials flow in the several phases of the logistics process, starting from the supply of raw materials and components, to the distribution of finished products. The company provide its own solutions

developed in its laboratory by software analysts and programmers with more than 20 years of experience.

According to customer needs, A&D is able to recommend integrated products and solutions (thanks to key partnerships with specialized companies operating in other areas of the Supply Chain) with regard to projects involving the production (MES) and transport management, providing logistics expertise at 360 °.

History

An history of success since 1993

Attention to customer satisfaction, continuous product innovation, performance of solutions offered and quality of its human resources. These are the reasons of the company's success.

1993

today

A&D began its activity in 1993, with the design and development of software for warehouse logistics.

The company quickly consolidates an experience that led her to “think of” and create Automa, a powerful and flexible product for warehouse management, which gathers together all the practical knowledge accumulated over the years and its innovative inclination.

Around this product, A&D develops later other applications that complement to it, with the aim to provide more complete solutions with an higher versatility and suitability towards modern communication and integration. Thanks to more than 20

years experience of its logistics and IT consultants, analysts and programmers, A&D it is able to deal with projects, even the most ambitious, offering its knowledge, adaptability in the design and application integration.

Nowadays, the resources area count with more than 20 specialists, with an excellent know-how both in the application field and in the IT technologies.

The important partnerships with companies operating in the technology and automation industry, allows A&D to face different projects and various issues, improving its knowledge and innovating more and more its solutions.

Convert the customer's needs in increasingly competitive solutions and services.

Solutions and technologies

We design and develop logistic solutions

We do not offer products but turnkey solutions, complete with consulting support and analysis from the signing of the contract to the start up of the project. Everything without making licensing policies.

Since its foundation, A&D focuses interest in the logistic sector, taking up the mission to provide companies with a powerful product aimed at the complete warehouse management.

Even today, the company's main focus is on Automa, a web-based software for the organization and optimization of the operations needed to warehouse management and stock, which makes use of a specific tracking tool for the accurate control of the various movements occurring within the physical structure, from the incoming flow to the final delivery.

Ambition and an increasing demand of complete logistic solutions, led A&D to improve its range of products developing complementary software in addition to its

main product, in order to optimize certain external aspects that are not strictly related to the warehouse management but still relevant in the logistic process, expanding sometimes the target market of its own products, as in the case of the solution studied for health facilities.

Nowadays, in addition to the WMS Automa and automation projects, A&D is able to provide solutions for electronic storage of documents, software designed for the acquisition of sales orders by agents and specific solutions for healthcare logistics, using the most advanced communication technologies and choosing the most suitable supporting tools for every solution (handheld terminal, computer, tablet, smartphone, etc.).

OUR SOFTWARE AND OUR TECHNOLOGIES

Automa

Integral and complete solutions for the warehouse logistics management. A modular and scalable product that can manage all the processes and issues of a traditional or automatic warehouse.

Automa Lt

Basic solution for the warehouse logistics management. A product designed for companies that want to manage the logistics process gradually, controlling the financial and organizational impact.

Automa Docman

Electronic storage solution. A product that meets the demands of digital archiving of documents to be kept. Integration with Automa also allows the physical storage and tracking of the documents.

Automa Health

Solution for the hospitals management. A product that lets you manage the logistics in terms of stock, but also in terms of direct surgeries room stock (department stores).

Automa SA

Solution for the commercial management of the orders. A product that support your salesforce, allowing a quick order creation and transmission to the company's ERP system.

Radio frequency

Technology based on electromagnetic signals that allow wireless communication between two or more hardware devices. It is mainly used by handheld terminals combined with barcode labels, which together with the WMS allow the execution of warehouse operations.

RFID

Technology for automatic identification / storage of information contained in holders called tags, which have the ability to respond remotely to devices defined as "readers". This technology allows the acquisition of information without reading the barcode.

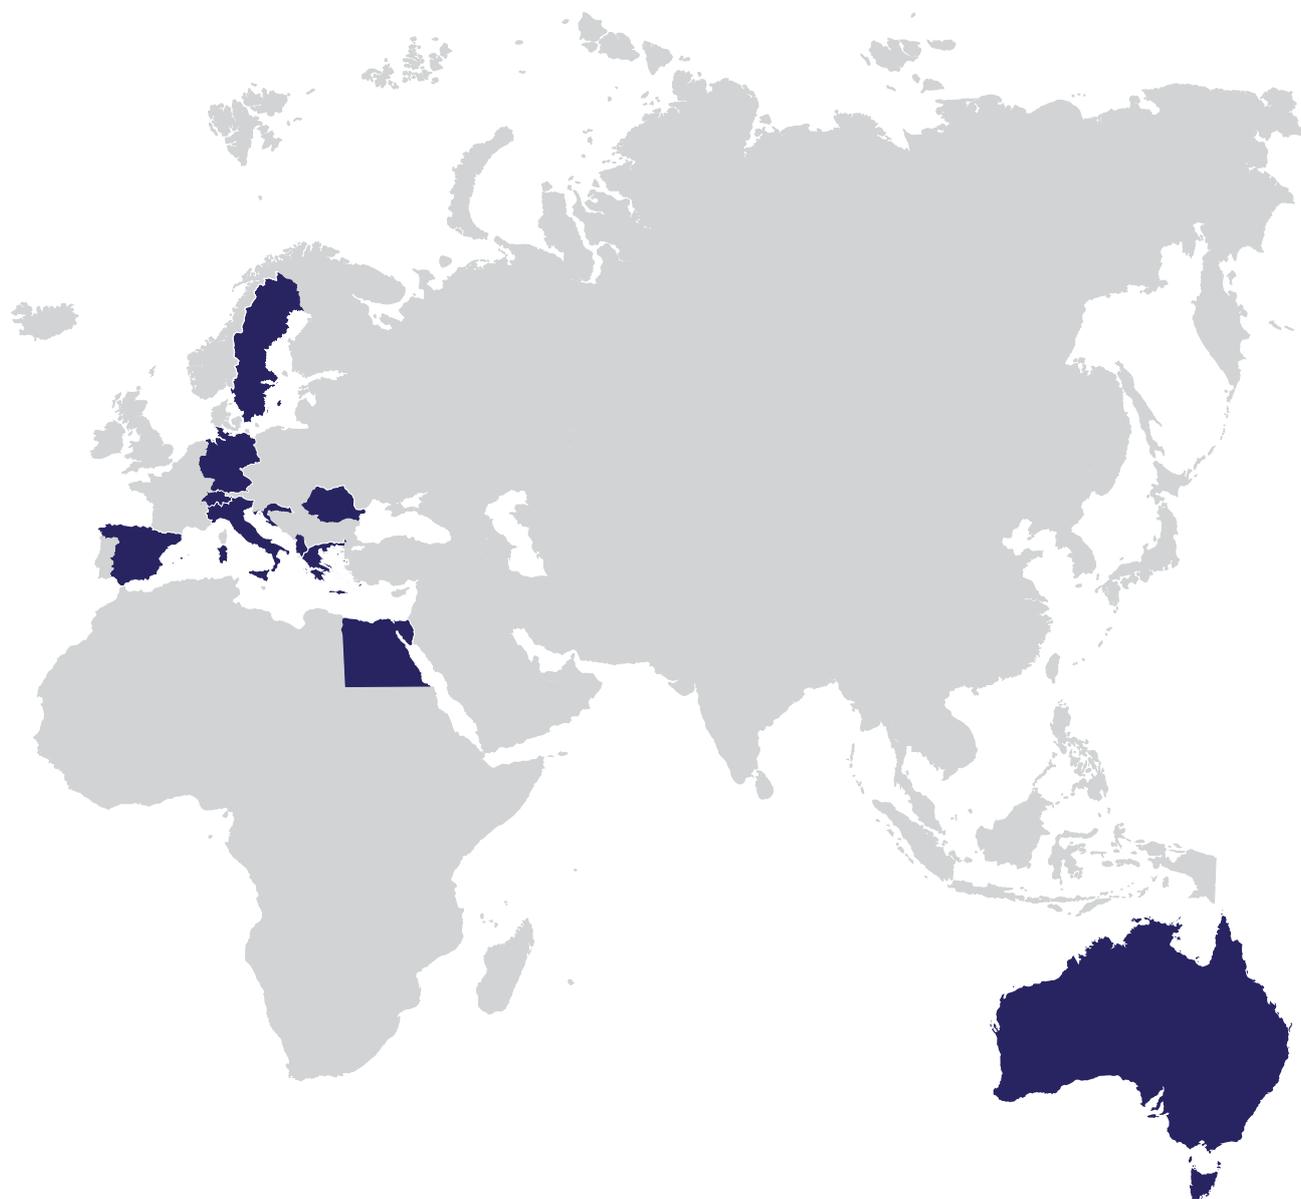

Voice

Technology that allows the application of voice to the operations carried out by warehouse operators. Converts the software instructions in voice commands and recognizes the warehouse operator answers, creating a fully voice communication between system and operator.
